Store performance review

January revenue fell because conversion weakened, not simply because traffic declined.

1 Nov 2020 to 31 Jan 2021 · historical GA4 sample · corrected for four tracking faults

TRACKING RELIABILITY

Four tracking faults fixed; 30% of orders were credited to the store's own site. Fix GA4 at source.

PRODUCT PAGES

3 in 4 product viewers never add to basket, on every device. Investigate, then A/B test.

CHANNEL CREDIT

Organic Search gets 40 to 43% under all seven models. Holdout-test Paid Search before cutting.

REPEAT PURCHASING

7.5% of customers buy on more than one day. Test a second-purchase offer within two weeks.

Source: GA4 public sample, Google Merchandise Store · orders deduplicated · self-referrals removed · funnel skips 22 days with a broken cart tag · order values missing 26 to 31 Jan

| Paid Search    | 1.2%       | 1.3%                  | 1.5%        | 1.3%   | 1.3%       | 1.3%                      | 1.5%                 |

FINDING

Organic Search gets 40 to 43% of credit under every model; 30% of orders went to the store itself.

EVIDENCE

Seven models agree within 3 points; Markov interval 38.6% to 41.1%; 65% of orders are single-visit.

INTERPRETATION

Credit is robust but isn't cause. Markov gives Paid Search 23% more credit than last click.

NEXT ACTION

Exclude own domains in GA4, protect SEO, and holdout-test Paid Search before cutting it.

Source: GA4 public sample, Google Merchandise Store · orders deduplicated · self-referrals removed · funnel skips 22 days with a broken cart tag · order values missing 26 to 31 Jan · Markov ignores date filters

Why might those pages convert poorly?

Observed: Apparel, YouTube shop, Dino Game Tee and store.html sit well below the site rate.  
Possible: low purchase intent (the Dino Game Tee draws searches for Chrome's offline game).  
Possible: untagged links (63% of Apparel landings are 'Direct').  
Possible: page friction; not yet tested.  
→ Check each page's traffic mix, then A/B test the Apparel page first.

|                                                                                                                          |                                                                                                                                    |                                                                                                                                          |                                                                                                                            |

What to do with each segment

Segments from recency, spend and number of buying days (docs/customers.md)

| Segment              | Customers | Customer share | Revenue share | Avg spend | Suggested action                                       |
|----------------------|-----------|----------------|---------------|-----------|--------------------------------------------------------|
| Big one-off spenders | 679       | 15.4%          | 41.1%         | \$205     | Thank-you and a second-purchase offer within two weeks |
| At risk              | 1,149     | 26.1%          | 22.1%         | \$65      | One win-back email with a real reason to return        |
| Repeat, lapsing      | 236       | 5.4%           | 13.4%         | \$193     | Personal note featuring their past categories          |

FINDING

15% of customers (679) bring 41% of revenue, and only 7.5% bought on more than one day.

EVIDENCE

6 in 10 repeat buyers return within 14 days; 30-day repeat 8.8% (Nov, 1,532) vs 5.7% (Dec, 1,870).

INTERPRETATION

One-off buys dominate and holiday buyers rarely return; browser-level IDs understate loyalty.

NEXT ACTION

Test a second-purchase offer within two weeks of a first order against a holdout group.

Source: GA4 public sample, Google Merchandise Store · orders deduplicated · self-referrals removed · funnel skips 22 days with a broken cart tag · order values missing 26 to 31 Jan · customers are browsers; filters use the first purchase

Only five pairs sell together often, all variants of one product

Pairs in 30+ orders · lift = times more often than chance · full period

| Product                | Bought with            | Orders | Lift |
|------------------------|------------------------|--------|------|
| Google Light Pen Green | Google Light Pen Red   | 40     | 50.2 |
| Google Light Pen Blue  | Google Light Pen Red   | 39     | 36.0 |
| Google Light Pen Blue  | Google Light Pen Green | 35     | 36.5 |

FINDING

A typical order is \$46; multi-product orders have a median of \$63 against \$25.

EVIDENCE

5,028 orders with values; 59% contain several products; only five pairs appear in 30+ orders.

INTERPRETATION

Bigger baskets go with bigger orders (an association). Frequent pairs are variants of one item.

NEXT ACTION

Test a free-shipping threshold just above the median and multi-colour sets against a control group.
